# 97-06 Jeep Wrangler TJ Rock Ready I 4" Suspension Lift Installation Instructions

### REQUIRED TOOL LIST:

- \* Safety Glasses
- \* Metric / Standard Wrenches & Sockets
- \* Allen Wrenches
- \* Drill & Assorted Drill Bits
- \* Grinder / Cut Off Wheel
- \* Pipe Wrench
- \* Floor Jack
- \* Jack Stands
- \* Measuring Tape
- \* Torque Wrench

Before beginning the installation, thoroughly & completely read these instructions & the enclosed driver's WARNING NOTICE. Affix the WARNING decal in the passenger compartment in clear view of all occupants. Please refer to the Parts List to insure that all parts & hardware are received prior to the disassembly of the vehicle. If any parts are found to be missing, contact SKYJACKER<sup>®</sup> Customer Service at 318-388-0816 to obtain the needed items. If you have any questions or reservations about installing this product, contact SKYJACKER<sup>®</sup> Technical Assistance at 318-388-0816.

Make sure you park the vehicle on a level concrete or asphalt surface. Many times a vehicle is not level (side-to-side) from the factory & is usually not noticed until a lift kit has been installed, which makes the difference more visible. Using a measuring tape, measure the front & rear (both sides) from the ground up to the center of the fender opening above the axle. Record this information below for future reference.

Driver Side Front: \_\_\_\_\_ Passenger Side Front: \_\_\_\_\_

Driver Side Rear: \_\_\_\_\_ Passenger Side Rear: \_\_\_\_\_

### Important Notes:

- If larger tires (10% more than the OEM diameter) are installed, speedometer recalibration will be necessary. Contact your local Jeep dealer or an authorized dealer for details.
- After installation, a qualified alignment facility is required to align the vehicle to the OEM specifications.
- 6-Speed Transmission models may require additional modifications, contact Skyjacker @ 318-388-0816 for additional information.

12STVCTN	1/2"STOVER COARSE, LOCK NUT	1

## **Pre-Installation Tips:**

**Now you are ready to "set" the length of the new Rock Ready™ link assemblies.**

It is very important to position the swivel ball socket so that the bushings are exactly centered. Measure the length of the link assembly between the center of the eyelet & the rod end. Rotate the rod end as needed, being sure to keep the rod end square with the eyelet end until the link assembly measures:

### **4" Measurements**

Lower Front should be set @ 29 1/4"

Lower Rear should be set @ 29 1/4"

These are pre-alignment measurements only. Final Measurements are to be set by a qualified alignment facility.

On the rod end, rotate the jam nut against the steel tubing. Hold the rod end in place with a pipe wrench & use another pipe wrench on the jam nut to completely tighten.

**Note:** The jam nut must be tightened against the steel tubing before installation.

## Front Installation:

1. Secure & properly block the tires of the vehicle on a level concrete or asphalt surface.
2. Raise the front of the vehicle & support the vehicle with jack stands.
3. Remove the front tires, front shocks, steering stabilizer, & track bar.
4. Remove the draglink from the pitman arm, & install the new Skyjacker pitman arm at this time.
5. Remove the sway bar end links & brake calipers from the OEM mounts. (See Photo # 1)
6. Lower the front differential & remove the front coil springs.
7. Remove the upper bump stop by pulling back & forth with pliers & install the new Skyjacker poly bump stops.

8. Remove the front lower control arms. Using care, grind off the OEM lower control arm mounts & paint the exposed surface. (See Photo # 2)

9. Place a jack under the transmission skid plate. Remove the mounting hardware & lower the skid plate two inches.

Photo #3

**Note:** Skyjacker sub frames are designed to work on 1997-2006 Jeep TJ's. Therefore, each sub frame will have multiple mounting holes.

- **1997-2002 models use mounting holes 1,3 & 5.**
- **2003-2006 models will use holes 2 & 4. See I-TJ403SP instruction for the 3rd mounting bolt & skid plate modifications.**

10. Place the new Skyjacker left & right sub frames between the bottom of the frame & the skid plate. Fasten using the 1/2" X 3" flat socket bolts on 97-02 models & use the 12mm x 80mm bolts on 03-06 models. (See Photo # 3) **Note:** On some models it may be necessary to grind down the OEM rear step bar nut insert on the outside of the frame. This will allow for the sub frame rail to mount flush.

11. Install the new Skyjacker transfer case shifter bracket (Part # JSRB231A) using the instruction provided.

12. With the new Skyjacker sub frame attached with the lower bolts, drill the outer mounting locations using a 1/2" drill bit. Drill completely through the frame & mounting tab located on the back side of the sub frame. (See Photo # 4) Once drilled, install the 1/2" x 4" fine thread bolt, washers, & nuts.

13. The new Skyjacker lower control arms mount to the OEM lower location at the differential & to the new position of the Skyjacker sub frame. Insert two large stepped spacers into the rod end of the new Skyjacker lower control arms & fasten using the OEM hardware. Install with the rod end to the axle mount & the bushing end to the frame mount. (See Photo # 5)

14. Lower the front differential & install the new Skyjacker coil springs placing the top of the coil spring over the upper bump stop mount first. Provided with the coil springs is the clip & hardware to fasten the passenger front coil spring like the driver's side. (See Photo # 6) The OEM manufacturer provides the hole in the left lower coil spring mount for you to fasten the coil spring securely to its seat. Install it the same as on the driver side.

5/16" x 3/4" thread cutter flange bolt.

15. Install the new Skyjacker adjustable track bar by first greasing & installing the two poly bushing & sleeve. Insert the poly bushing end into the OEM steering stabilizer location on the passenger side of the axle, not the OEM track bar location. Install the new Skyjacker steering stabilizer mounting bracket with the tab over the OEM sway bar end link stud with the OEM nut. Use the 1/2" x 2 1/2" flat socket head bolt & stover nut to bolt the new Skyjacker bracket to the track bar. (See Photo # 7) **Note:** In extreme situations (Depending on pinion angle & caster settings), the drag link may contact this bracket when turning. This bracket can be slightly ground for additional clearance, if needed.

16. Install the frame end of the new Skyjacker track bar by following the hardware pictured. (See Photos # 8 & 9) Being sure to keep the rod end square (parallel) with the frame mount. **Note:** Be sure no more than 1/2" of threads are extended from the bar (including the jam nut). Hold the rod end in place with a crescent wrench & tighten using a pipe wrench or crescent wrench on the jam nut.

17. Install the steering stabilizer mounting stud in the hole of the drag link & upper mounting hole on the new Skyjacker track bar bracket. Install the provided 5/8 hourglass bushings into the new Skyjacker steering stabilizer & attach to the new Skyjacker studs. (See Photo # 10)

18. Install the new Skyjacker front brake lines using the instructions provided with the brake line kit.

19. The new Skyjacker end link mounting bracket should be mounted to the bottom of the sway bar with the bolt pointing up through the sway bar & with the nut & washer applied on top. (See Photo # 11) Apply grease to the metal sleeves & insert them into the end link eyes. The top 1/2" x 2 1/2" bolt connecting the bracket to the end link must be installed with the nut to the outside of the vehicle to provide adequate clearance to the frame. Install the new Skyjacker double disconnect end links on the inboard side of the axle bracket. (See Photo # 12)

20. Install the front tires & lower the vehicle to the ground.

## **Rear Installation:**

1. Raise the rear of the vehicle & support the vehicle with jack stands.
2. Remove the rear tires & rear shocks.
3. Disconnect the rear track bar from the differential & remove the rear sway bar endlinks.

4. Lower the differential & remove the rear coil springs.

5. Remove the upper bump stop by pulling back & forth with pliers. Remove the 10mm bolt from inside the bump stop cup & install the polymer bump stop spacer & OEM cup using the supplied 10mm x 70mm bolt. Reinstall the OEM bump stop to the OEM bump stop cup. (See Photo # 13)

6. Install the new Skyjacker rear coil springs.

7. Place the new Skyjacker rear track bar relocation bracket over the OEM track bar mount at the differential. Place the new 12mm x 70mm bolt through the OEM lower track bar location. Use the supplied spacer sleeve to fill the space where the OEM track bar was located. Apply the lock nut & tighten. (See Photo # 14)

8. Drill a 1/2" hole through the hole in the driver's side end of the new Skyjacker bracket. Install the 1/2" x 1 1/2" bolt with a washer on each side through the newly drilled hole & tighten with the self-locking nut. Install the 5/16" x 1" fine thread bolt, washers, & nut in the forward hole of the new bracket. (See Photo # 15)

9. Assemble the new Skyjacker rear sway bar end links by applying grease to the metal sleeves & inserting them into each eye. Install using OEM hardware.

10. Remove the lower control arms & rear lower control arm mounts at the frame. Repeat the process from the front lower control arm mounts. Clean & paint the exposed surfaces. The new Skyjacker rear lower control arms mount to the OEM lower location at the differential & to the new position of the sub frame. Insert two stepped spacers into the rod end of the new Skyjacker lower control arm. Install the new Skyjacker lower control arm with the rod end to the axle mount & the bushing end to the frame mount. Fasten using the OEM hardware. (See Photo # 16)

11. Install the rear brake line & rear shocks.

12. Install the rear tires & lower the vehicle to the ground.

**FINAL NOTES:**

- After the installation is complete, double check that all nuts & bolts are tight. Refer to the following chart again for the proper torque specifications. (Do not retighten the nuts & bolts where thread lock compound was used.)
- With the vehicle placed on the ground, cycle the steering lock to lock & inspect the steering, suspension, brake lines, front & rear drivelines, fuel lines, & wiring harnesses for proper operation, tightness, & adequate clearance.
- Have the headlights readjusted to the proper settings.
- Have a qualified alignment center realign the front end to the factory specifications.
- Retorque all the bolts after the first 100 miles.

<b><u>TORQUE SPECIFICATIONS</u></b>					
<b><u>INCH SYSTEM</u></b>			<b><u>METRIC SYSTEM</u></b>		
<b>Bolt Size</b>	<b>Grade 5</b>	<b>Grade 8</b>	<b>Bolt Size</b>	<b>Class 8.8</b>	<b>Class 10.9</b>
5/16	15 FT LB	20 FT LB	6MM	5 FT LB	9 FT LB
3/8	30 FT LB	35 FT LB	8MM	18 FT LB	23 FT LB
7/16	45 FT LB	60 FT LB	10MM	32 FT LB	45 FT LB
1/2	65 FT LB	90 FT LB	12MM	55 FT LB	75 FT LB
9/16	95 FT LB	130 FT LB	14MM	85 FT LB	120 FT LB
5/8	135 FT LB	175 FT LB	16MM	130 FT LB	165 FT LB

• The above specifications are not to be used when the bolt is being installed with a bushing.

**Seat Belts Save Lives, Please Wear Your Seat Belt.**

www.skyjacker.com

**REQUIRED TOOL LIST:**

- Safety Glasses
- Metric / Standard Wrenches & Sockets
- Drill & Assorted Drill Bits
- Transmission Jack
- Reciprocating Saw / Cut Off Wheel
- Measuring Tape
- Torque Wrench

**Note:** 03-06 Jeep TJ models will require modification to the OEM skid plate in order to install the Skyjacker sub frame.

1. Remove the front transmission skid plate & cross member assembly.
2. Disconnect it from the transfer case skid plate & frame rails.
3. Using a transmission jack, support the transmission.
4. Remove the six retaining bolts that attach the transfer case skid plate to the frame.
5. With the skid plate removed, use the supplied templates to scribe & cut the rear of the OEM transfer case skid plate. (See Photos # 1, # 2, & # 3)
6. Photo # 4 shows the portion removed from the driver side & Photo # 5 shows the portion removed from the passenger side.

**Photo #1**  
Driver Side Shown Above

**Photo #2**  
Passenger Side Shown Above

**Photo #3**

**Photo #4**

**Photo #5**

7. With the transfer case skid plate modified, locate the new Skyjacker rear mounting brackets. Mount the new Skyjacker bracket to the new control arm mounting point on the sub frame using the OEM lower control arm bolt. Install the bracket so that it is flush against the sub frame & the back of the skid plate.

**Photo #6**

8. Once installed, mark & drill the new mounting point on the skid plate, using a 3/8" drill bit. Install & tighten the supplied 3/8" hardware at this time. (See Photo # 6)

9. Locate the front transmission skid plate & cross member assembly removed in Step # 1. Locate the outside frame mounting points on the cross member. Measure 3 1/8" from the inside of the mounting hole toward the center of the cross member. Using a straight edge, mark the cross member at this point. Repeat this process on both sides. (See Photo # 7)

**Photo #7**

10. Using a reciprocating saw or similar tool, cut the outer mounting points off at the mark made in Step # 7. (See Photo # 8)

11. With the outer mounting points cut off, reinstall the cross member & transmission skid plate assembly. Mount the new Skyjacker bracket to the new control arm mounting point on the sub frame, using the OEM hardware. Install the bracket so that it is flush against the sub frame & flush with the top of the cross member. (See Photo # 9)

**Photo #8**

12. Mark the new mounting points in the top of the cross member & remove the cross member at this time. Drill the new mounting points, using a 3/8" drill bit. (See Photo # 10)

13. With the new mounting points drilled, reinstall the cross member & the new Skyjacker mounting bracket. Attach the new Skyjacker bracket to the cross member using the supplied 3/8" hardware. (See Photo # 11)

Refer back to lift kit instructions at this time.
